

NUR RAHMAWATI

Pringsewu, Lampung, Indonesia • +6281912479025 • nurrahmawati.id@gmail.com
[LinkedIn](#) | [GitHub](#)

PROFIL / PROFILE

Fresh graduate in Informatics Engineering with a strong foundation in data-driven problem solving and information technology. Experienced in data processing, analysis, and reporting, as well as developing machine learning-based solutions. Demonstrated ability to manage and reconcile data accurately, create structured reports, and build interactive dashboards. Proven leadership experience through academic projects and hands-on internship exposure in data entry operations. Detail-oriented, adaptable, and eager to contribute in dynamic and collaborative work environments.

PENDIDIKAN / EDUCATION

Bachelor's Degree in Informatics Engineering
Institut Informatika dan Bisnis Darmajaya, Lampung

- GPA: 3.90 / 4.00
- Thesis: Support Vector Machine in E-Promotion Strategy for Increasing Sales in SMEs
- Concentration: Artificial Intelligence

2022 – 2026

KEAHLIAN / SKILLS

IT & Technical	Python (Pandas, NumPy, TensorFlow, OpenCV) • SQL (Basic) • Machine Learning & Deep Learning • Data Cleaning & Analysis • Flask • FastAPI • HTML, CSS, JavaScript
BI & Reporting	Google Data Studio • Power BI • Dashboard Development • Data Visualization • CorelDRAW (Basic)
Office & Admin	Microsoft Excel • Microsoft Word • Google Sheets • Google Workspace • Data Entry & Verification
Soft Skills	Detail-Oriented • Analytical Thinking • Fast Learner • Team Collaboration • Written & Verbal Communication
Language	Bahasa Indonesia (Native) • English (Intermediate)

PENGALAMAN KERJA / WORK EXPERIENCE

Data Entry Operator — Internship
Kantor Kepala Pekon Pararejo, Pringsewu, Lampung • On-site

- Entered and verified 100+ household records into the MetaDesa.id system to support digital village data management
- Ensured data accuracy and consistency through validation and cross-checking processes
- Organized and structured administrative data for reporting and documentation purposes
- Developed a flood prediction website as part of an academic project using Fuzzy Logic and Machine Learning, along with a web-based interface (HTML, CSS, JavaScript)
- Designed user-friendly interfaces and basic data visualizations to improve accessibility for local users
- Assisted in creating and designing village project materials using CorelDRAW

Jul 2025 – Agt 2025 (2 months)

PENGALAMAN PROYEK / PROJECT EXPERIENCE

AI Interview System (LLM-based)
Capstone Project — Dicoding • Team Lead

- Led a team in developing an AI-based interview system using LLM and speech-to-text (Whisper) for real-time interview simulation

2025

- Integrated NLP and Whisper for real-time response processing through an interactive web interface (HTML, JavaScript, API integration)
- Built both backend and frontend components for an AI-driven interview simulation system

Vehicle Detection System (YOLOv8)

2026

Personal Project • Computer Vision

- Developed an object detection model for 5 vehicle classes using YOLOv8, trained on a custom dataset achieving ~0.60 mAP@50
- Implemented real-time detection by integrating IP Webcam with OpenCV for video inference and live streaming
- Evaluated model performance using precision, recall, and mAP metrics; built a demo system for both video-based and live inference

Butterfly Species Classification (TensorFlow & MobileNetV2)

2025

Personal Project • Deep Learning

- Developed an image classification system comparing a custom CNN and MobileNetV2, achieving ~87% test accuracy
- Applied regularization techniques such as Early Stopping and Dropout to improve model generalization and prevent overfitting
- Exported trained models to TensorFlow Lite (TFLite) and TensorFlow.js for deployment on mobile and web platforms.

ML-based Flood Prediction System

2025

Personal Intern Project • Web + Machine Learning

- Developed a real-time flood prediction web application using the Decision Tree algorithm with Flask as the backend
- Integrated external weather APIs to enable real-time predictions and provide actionable insights for local communities
- Implemented frontend components to visualize prediction results and system status using HTML, CSS, and JavaScript
- visual.

Transaction Data Analysis

2025

Data Analytics Project — Business Insight

- Performed data cleaning, EDA, and feature engineering on transaction dataset
- Built K-Means clustering model (silhouette score: 0.51) and classification models (RF, SVM,
- Generated insights on customer behavior based on age, transaction channel, and occupation

Vehicle Traffic & Operational Area Data Analysis

2024

Business Intelligence Project — Management Reporting

- Managed operational data (traffic and area) in a structured manner for reporting purposes.
- Performed data grouping and analysis to support understanding of operational patterns.
- Created concise dashboard visualizations ready for reporting use.

PELATIHAN / TRAINING

Machine Learning Cohort — Dicoding Indonesia

Agt 2025 – Jan 2026

- Completed an intensive machine learning program covering supervised and unsupervised learning, including model development (Decision Tree, Random Forest) and clustering for data analysis
- Built a sentiment analysis pipeline using LSTM, SVM, and Random Forest from data preprocessing to model evaluation
- Led a team in developing an AI-based interview simulation platform, designing full-stack architecture and integrating LLM-based services for dynamic interaction
- Coordinated team development and ensured successful project delivery

SERTIFIKASI / CERTIFICATIONS

- Junior Data Scientist — BNSP (*Badan Nasional Sertifikasi Profesi*)
- Data Analysis Fundamentals — Dicoding
- Applied Data Science — Dicoding
- Machine Learning for Beginners – Dicoding
- Deep Learning Fundamentals - Dicoding
